DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I, claims 1, 2, and 13-20 in the reply filed on March 30, 2006 is acknowledged.

Claims 3-12 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on March 30, 2006.

Applicants are advised that the rejoinder practice under *In re Ochiai* is not applicable as the elected subject matter for prosecution is drawn to a method.

Drawings

The drawings received on February 6, 2004 are acceptable.

Information Disclosure Statement

The IDS received on February 6, 2004 is acknowledged.

A signed copy of the PTO-1449 is enclosed herewith.

Specification

The disclosure is objected to because of the following informalities: the specification contains a Table of Contents, which correlates contents with a pager number. However, when a patent issues, the contents will not correspond with the page number. The removal of the page numbers is required therefore.

Appropriate correction is required.

Claim Objections

Claims 13-20 are objected to because of the following informalities: Claims recite the term, “SERS” without first identifying what the acronym means. Amending the claims to first recite, “Surfaced Enhanced Raman Scattering” would overcome this objection.

Appropriate corrections are required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 13 and 16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 13 is indefinite for reciting the phrase, “collecting photonic data from the Raman spectrograph and transforming said photonic data into electronic data for further data processing,” because the metes and bounds embraced by the limitation, “further data processing,” is indefinite.

Claim 16 is rejected for reciting the phrase, “the SERS substrate,” because there is insufficient antecedent basis for this limitation. The application appears to distinguish between a “near field SERS substrate” (see claim 15) and an SERS substrate, and thus, based on this distinction, there can be no antecedent basis for “the SERS substrate.”

Claim Rejections - 35 USC § 101

Art Unit: 1637

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 1 and 2 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1 and 2 of prior U.S. Patent No. 6,376,177 B1. This is a double patenting rejection.

Claims 1 and 2 of the instant application are identical in scope to claims 1 and 2 of the '177 patent.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 13-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 3-10 of U.S. Patent No. 6,376,177 (herein, the '177 patent).

Art Unit: 1637

Although the conflicting claims are not identical, they are not patentably distinct from each other for the following reasons.

Claims 13-20 differs from claims 3-10 of the '177 patent in that the claims of the patent explicitly recites that the method is for detecting DNA or RNA and that the hybridizeable molecules are unlabeled DNA or RNA. However, these embodiments are drawn to species which anticipate the genus embraced by instant claims 13-20, wherein the method of the instant application recites that the method is for detecting DNA and that the near-field SERS is arrayed with predetermined hybridizeable molecules.

Therefore, the claims are obvious over each other.

Conclusion

No claims are allowed.
